

# Agenda

## Progress report:

- progress since previous meeting
  - MVP
    - add, join, leave rides
    - show all open rides
    - "my rides"
- achieved and missed milestones
  - Achieved:
    - All for MVP but the missed (below)
  - Missed:
    - Didn't implement passphrases and ride page
- difficulties encountered
  - each team member did fitter differently, had to decide on one way
  - figuring out mongoose idiosyncrasies (update only one at a time)
- changes to problem analysis or design
  - decided against MIT certificates -> sign in and sign up

## Questions:

- Middleware issues (require participation)
- Bootstrap not working on deployed heroku app
- How our code looks so far
- How to deploy with a src folder
- Why errors page shows stack trace

## Next steps:

- header should only show one of login/logout
- reviews
  - write new review
  - user reviews page
- ride page
  - passphrase
  - list of passengers + their user rating (link to their page)
  - ability to vote user out of ride
- ride table on my ride page
  - past vs upcoming rides
  - link to leave reviews for past rides
- ride table on home page
  - sort rides by location/time (on table)
  - search rides by locations and/or time (starting with string searches)
- add style to our front end (and deployed version)
- clean up code (consistent variable names, documentation, etc.)

- clean up implementations
  - validation (fields can't be blank, @mit.edu email, etc.)
  - security and elegant error handling
