

## Meeting Minutes

- Make sure you can see who else is in the ride (rides page)
- Google Maps API, can search a location and identify nearby rides
- UI/UX - show a map, nav bar, etc.
- Prevent overlapping rides by checking estimated trip times (again from Google)
- Middleware can return a flag to determine what information can be shown, \*ride instead of :ride?
- Regarding directory layout, it is possible to include a src folder by redirecting npm start to the correct folder. package.json and Procfile should be at the root.
- If somebody joins then leaves the ride, we can generate a new passphrase (Factory girl to generate passphrase)
- passport js - passport local, passport facebook
